information of the producer's clients/users. Said user information includes the client identifiers used by the producer, i.e. the user identifiers and the public keys of the users. On the basis of said information, the producer's server writes the access right messages transmitted to the intermediator.--.

Page 9, replace the first, second and third full paragraphs as follows:

A3  

---

--The intermediator equipment 440 includes the intermediator's server 441, which is connected to the Internet data network. The intermediator's server includes the database 448, in which the user-specific intermediary directories are recorded. In addition, the intermediator's server includes the user registers 446, which contain the necessary information of the users and of the user verification procedures, whereby the user is verified in order to grant access to one or several user-specific intermediary directories. Moreover, the intermediator's servers includes producer registers, which contain information of possible data transmission encryption procedures used with various producers, as well as lists of the user identifiers used by the producers and of their respective identification with the users included in the intermediator's register.

The user's equipment 420 can be an ordinary computer connected to the Internet data network for instance by means of a modem, provided with the necessary browser programs and possible data transmission encryption programs.
